

# The LiveU-Enabled AJ-PX5000, AJ-PX270, and AJ-PX800

*Connect Panasonic Cameras with LiveU Central All-IP Management Platform*

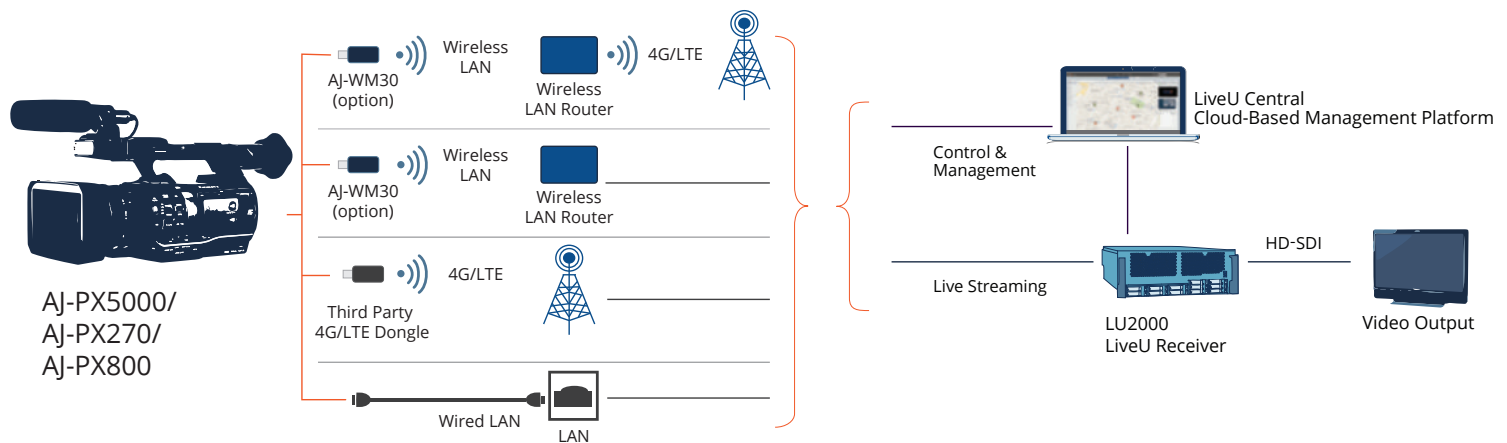

Presenting an integrated camera and live video uplink solution that links and leverages the LiveU Central, cloud based, management platform and Panasonic AJ-PX5000, AJ-PX800 and AJ-PX270 cameras.

With LiveU Central and Panasonic live cameras, any camera operator can manage a live video uplink while shooting, a must for a one-person remote crew. LiveU Central links via the camera interface, giving operators real-time indications of live transmission status and video transmission quality.

Panasonic's AJ-PX5000, AJ-PX800 and AJ-PX270 professional ENG cameras now support direct connection to the LiveU Central management platform using public networks such as 4G/LTE, Wi-Fi or wired LAN.

Camera integration with LiveU Central allows a variety of remote camera control features, including iris, white balance, record and master gain.

## Panasonic Camera & LiveU Central Connectivity Workflow

## About LiveU Central

The LiveU Central management platform allows full control and monitoring of the entire LiveU ecosystem and content via any browser-supported computer or tablet, from anywhere around the world.

**Remote Control** Manage LiveU field units, and connected Panasonic camcorders all over the world from a centralized control room or manage broadcasts from the field from any browser-supported device.

**Real-Time Video Preview** Live preview of all incoming feeds that can be dragged and dropped to any physical server output anywhere around the world or encoded for web streaming.

**Geolocation** Track LiveU units on a map, and easily monitor cell signals and performance.

**File Manager** Playback or export of recorded Store & Forward or FTP files.

**LiveU MultiPoint** Internal and cross-organizational professional video distribution.
